Dynamics

Dynamics describes how loud or quiet sounds are. We use words like 'loud', 'quiet', 'louder' and 'quieter' to describe dynamics.

getting louder

getting quieter

Let's listen:

- Listen to Rossini: William Tell Overture: Final.
- Tiptoe around your space when the music is quiet and jump around your space when the music is loud.

Play along:

Once you have got to know the music, find something for you to use to play along with like a jar of coffee as a shaker or a pan and spoon as a drum.

- Listen carefully to the changes in dynamics as you play along. Can you play your instrument in the same way?
